ANGELES
RIVER

Upper Los Angeles River Watershed Management Group

Semi-Annual Report

January 1, 2024 – June 30, 2024

A partnership between the cities of Los Angeles, Alhambra, Burbank, Calabasas, Glendale, Hidden Hills, La Canada Flintridge, Montebello, Monterey Park, Pasadena, Rosemead, San Fernando, San Gabriel, San Marino, South El Monte, South Pasadena, Temple City, and Los Angeles County and Los Angeles County Flood Control District

December 16, 2024

**CDM
Smith**

Regional Phase 1 MS4 NPDES Permit
Order No. R4-2021-0105
NPDES No. CAS004004

Watershed Management Program Progress Report Form
Reporting Period January 1, 2024 – June 30, 2024

Watershed Management Program Name	Upper Los Angeles River Watershed Management Group
Participating Permittee(s)	City of Los Angeles, Los Angeles County, Los Angeles County Flood Control District, and the cities of Alhambra, Burbank, Calabasas, Glendale, Hidden Hills, La Canada Flintridge, Montebello, Monterey Park, Pasadena, Rosemead, San Fernando, San Gabriel, San Marino, South El Monte, South Pasadena, and Temple City
Date of Watershed Management Program Progress Report	December 16, 2024
Initial Approval Date of Watershed Management Program (according to Table 12 or Part IX.G.3 of the Order)	April 20, 2016

Table of Contents

Section 1 Overview 1-1

Section 2 Watershed Control Measures Progress 2-1

Appendices

- Appendix A Section 1.2 – Watershed Control Measures Completed
- Appendix B Section 1.3 – Watershed Control Measures Planned and In Progress
- Appendix C Section 1.4 – Water Body Pollutant Combination (WBPC) Compliance
- Appendix D Section 1.5 – Additional Information

Section 1

Overview

Healthy lakes, rivers, creeks, and oceans isn't just something we want, it's something we need. It's so important that the federal government realized, way back in 1948 when the Federal Water Pollution Control Act was passed, that we needed to keep our waters protected so they wouldn't become dumping grounds for all our garbage and pollution. Big changes were made in 1969 when California adopted the Porter Cologne Act to govern water quality regulations and again in 1972 when the federal government expanded and reorganized the original clean water laws, which led to what we know as the Clean Water Act.

The Clean Water Act works hard for us! It sets the stage for what the states need to do to protect the waters within their borders. In our region of California, this falls on the Los Angeles Regional Water Quality Control Board (let's just call them the Regional Board) to understand the requirements and enforce them.

Whew! That's a lot of legal mumbo-jumbo. What does this all mean?

Basically, the Regional Board has the power to make sure everyone in the region keeps our waterways clean. Anyone who puts water into a river, lake, or ocean must explain to the Regional Board how they will keep the water clean, and they cannot release the water until the Regional Board agrees and issues a permit.

What does that have to do with me and my city or county?

Because so much pollution comes from our cars, industries, landscaping, litter, and pets, a lot of our waterbodies have too much pollution entering them right now. Our cities and the county are working hard to clean up their stormwater, but all of us still need to do a lot to fix the problem created by the way people live.

Ever notice how when it's raining, all the water on the street flows into a gutter on the side of the road? Well, that water all flows into a storm drain which carries the water until it empties into a river, creek, lake, or the ocean. This stormwater basically washes the ground as it flows by and carries with it all the trash, oil, pollution, and gunk that has accumulated on the land since the last rainfall.

Here in our region, we have what we call **municipal separate storm sewer systems** (or MS4 for short!). They are called "separate" because they carry only stormwater and are *separate* from the sewers that carry raw sewage (for example, whatever goes down the drain when we do things like shower or flush the toilet). Unlike sewage that gets cleaned up at a water reclamation plant, the stormwater in the MS4s drains directly to the rivers, creeks, lakes, and ocean unless it is captured before it gets there. Because of this, your city or county is responsible for removing the pollution the stormwater picks up from its land (and for some cities, that's a LOT of land!).

This sounds like a big problem! How do we deal with it?

We want to be able to go swimming and not get sick, and we want the fish and plants to have a healthy ecosystem. Remember the Regional Board we were talking about? Their job is to make sure your city doesn't let the waterbody take on more pollution than people, plants, aquatic animals, and local ecosystems can handle. To do this, the Regional Board requires that the cities and county figure out what they need to do to limit pollution. The cities and county create a plan of action, which usually includes creating programs and building projects, then send it to the Regional Board to approve it. The cities and county then follow the plan and report on progress every six months.

Next, we'll go over what we've been doing in our watershed. You can visit our website to learn more and to get an explanation for some of the terms you may not be familiar with.

Check us out at: www.lastormh2o.org.

We are so glad that you are interested in your watersheds!

Section 2

Watershed Control Measures Progress

The Upper Los Angeles River (ULAR) Watershed Management Group has a long list of members. The Group is made up of the following cities and agencies: City of Alhambra, City of Burbank, City of Calabasas, City of Glendale, City of Hidden Hills, City of La Canada Flintridge, City of Montebello, City of Monterey Park, City of Pasadena, City of Rosemead, City of San Fernando, City of San Gabriel, City of San Marino, City of South El Monte, City of South Pasadena, Temple City, City of Los Angeles, Los Angeles County, and Los Angeles County Flood Control District. The Group has developed a Water Management Program (WMP), which is the plan that the agencies are following to keep our waters clean.

A HUGE benefit to managing stormwater as a group is that the agencies work together to make the best decisions for the region. All the agencies in our Group are working together to come up with opportunities to partner on projects and to plan for the future of our watershed. Additionally, some of the member agencies formed partnerships to plan specific projects that are unique to their jurisdictions.

Group members with project specific partnerships

- City of Los Angeles
- Calabasas
- Monterey Park
- Montebello
- Los Angeles County Flood Control District
- Temple City
- South Pasadena
- San Fernando
- Pasadena
- El Monte
- Los Angeles County

Non-group members partnering with the Upper Los Angeles River Watershed Management Group on specific project opportunities

- Los Angeles Department of Water and Power
- Los Angeles County Department of Parks and Recreation
- Council for Watershed Health
- Baldwin Park
- La Puente
- West Covina
- Industry
- Bassett Unified School District
- San Fernando Valley High School
- Las Virgenes Municipal Water District
- Trust for Public Land
- Pacoima Beautiful
- San Fernando Valley High School
- California State Coastal Conservancy
- Los Angeles Housing Department
- Community Redevelopment Agency Los Angeles
- Boeing Company
- Wells Fargo Foundation
- Water Replenishment District of Southern California
- Council for Watershed Health
- Santa Monica Bay Restoration Commission
- TreePeople
- Mountains Recreation and Conservation Authority

- Los Angeles Department of Recreation and Parks
- Sanitation Districts of Los Angeles County
- Caltrans
- State Water Resources Control Board
- Los Angeles Council Districts
- Los Angeles Conservation Corps
- Los Angeles Police Department
- Los Angeles Bureau of Street Services
- Agency and Council Districts
- Pasadena Water and Power
- California Department of Forestry and Fire Protection
- Los Angeles Sanitation
- North East Trees
- Arroyo Seco Foundation
- California Integrated Waste Management Board
- Pasadena Unified School District

The Upper Los Angeles River Watershed had several milestones in their WMP this reporting period. All reaches of the Los Angeles River and its tributaries had a final milestone for metals during dry weather. The Group met the milestone for metals during dry weather (100%). Lake Calabazas and Legg Lake had final milestones for nutrients. However, no receiving water data were available after the milestone to evaluate if the final milestone for nutrients were met. The Lake Calabazas and Legg Lake milestones for nutrients will be evaluated during a future reporting period when the necessary data are available.

The Group also had target dates for an additional 52 non-TMDL water body-pollutant combinations (WBPCs) at various water bodies in the watershed. Appendix C includes a list of the WBPCs and the status. Selenium in Los Angeles River Reach 6 during dry weather was the only WBPC that was not met (0% attained). Because the Los Angeles River Metals TMDL says that selenium comes from natural sources, the Group is not implementing control measures specific to selenium and the Group is not proposing a revised action/milestone.

The agencies have done a lot of work to get ready for future milestones. There are 195 projects that are completed and/or are currently underway in the Upper Los Angeles River Watershed. These projects are either non-structural solutions that prevent pollutants from entering our storm drains or large regional projects that capture, treat, and/or infiltrate stormwater. We have already completed 107 projects (woohoo!) and we are working on 88 in-progress projects. Check out the chart (Figure 2-1) to see how much we've done (the part of the bucket that is filled by the stormwater we are capturing by completed and in-progress projects) compared to how much we

Figure 2-1

need to do to reach our final goals (the empty part of the bucket that we need to fill up with stormwater captured by new projects).

Forty-two projects received technical assistance funding (aka, money to help with the planning of projects) from various sources. Other projects received funding for other phases of the projects (for example, construction, operation, and maintenance) as well. Across all phases, funding for projects was received from a variety of sources, including the Safe, Clean, Water Program (Measure W), as well as many not-for-profit organizations. The following list shows many of the funding sources.

Funding sources for Upper Los Angeles River Watershed projects

- The Safe, Clean Water Program (Measure W)
- Proposition O, Measure A
- Urban Development Areas Planning Grant
- Capital Improvement Expenditure Program
- Urban Forestry & Urban Greening: Leading Edge Projects Grant Program
- Proposition 84
- Proposition 12
- Caltrans
- Integrated Regional Water Management Funding from Department of Water Resources
- Los Angeles Department of Water and Power
- Los Angeles Bureau of Sanitation and the Environment
- Caltrans-Federal Transportation Improvement Program
- Council for Watershed Health, LA Waterkeeper
- The Liberty Hill Foundation
- Neighborhood Initiatives Fund
- California Natural Resources Agency
- Supplemental Environmental Project Fund
- Los Angeles Community Redevelopment Excess Bond
- Los Angeles Department of Recreation and Parks Funding
- Proposition K
- Proposition 50
- Mayor's Budget
- State Grant from Council Office
- Proposition 1
- State Ocean Protection Council's State Proposition 1 Fund
- Proposition 68
- Los Angeles County Flood Control District
- Municipal general fund
- Measure M
- State Coastal Conservancy
- State Water Resources Control Board
- City of Los Angeles Community Development Block Grant
- State Rivers and Mountains Conservancy
- California State Coastal Conservancy
- City of Los Angeles' Transfer of Floor Area Rights,
- Municipal programs
- Pasadena Water and Power
- City of Pasadena's Public Works

Check out the charts that show how much money we received so far (Figure 2-2), and how much we received compared to how much we need to do all the work to reach our goals (Figure 2-3). We're excited to now have the Safe, Clean Water Program in place, which just began funding projects in 2019, and we are hard at work getting ready to ask for more money to fund the best projects.

Figure 2-2

Figure 2-3

Stormwater projects don't just clean up the water, they can improve the environment and help the community in other ways as well. Figure 2-4 shows a summary of how these projects are contributing to a better community.

In addition to the large projects mentioned here, stormwater is being captured across the watershed on individual properties. Homeowners, developers, and public agencies are required to manage their stormwater on-site when they build new or redevelop properties. In an area as dynamic as the Los Angeles region, there is always construction going on. This means a lot of stormwater and dry weather runoff will be captured and treated, or allowed to soak into the

ground, as properties are built or improved. Making stormwater management part of land development cuts down on the amount of large and expensive regional projects that need to be built. Keeping our waters clean by requiring both new developments and redevelopments to treat their own water is called “low impact development,” or LID for short. LID projects will also help our Group reach our final goals and are included in the full part of the bucket (Figure 2-1). Using LID means we’re being smart about how we build and thinking about stormwater ahead of time, which benefits everyone!

While our watershed group is doing a lot to reach water quality goals and provide benefits to the community, we still have more work to do. A key roadblock has always been finding enough money to build and take care of these projects. Since funding became available in 2019 through the Safe, Clean Water Program (Measure W), the agencies are working to develop high quality projects that have a good chance of receiving money. Supporting these projects can go a long way and we hope you’ll **stay involved, in touch, and engaged** so we can bring the best projects to our communities!

To see a complete list of projects and efforts completed and/or in progress in the watershed from December 28, 2012, to the end of this reporting period (June 30, 2024), check out Appendices A and B. Appendix C shows what deadlines occurred during this reporting period (January 1, 2024 to June 30, 2024).

We update this report every six months, in June and December, so keep a look out for the next update. Our websites are also a great resource to learn more about the watershed, how we are doing, and to get more information on the terms and ideas we discussed in this report.

We hope to see you soon at www.lastormh2o.org !

Appendix A

Section 1.2 – Watershed Control Measures Completed

Order R4-2021-0105 NPDES Permit No. CAS004004 - Appendix H, Section 1.2 Watershed Control Measures requires the completion of Table 1a for watershed control measures completed from December 28, 2012, to the end of this reporting period. Section 1.2a provides a list of additional information to be provided for each watershed control measure. Appendix A of this Semi-Annual Report includes this information in 2 parts to address these requirements. The tables are titled as follows:

- Section 1.2 - Table 1a (Part 1): Watershed Control Measures Completed
- Section 1.2 - Table 1a (Part 2): Additional Information

Section 1.2 - Table 1a-part 1: Watershed Control Measures Completed

Agnes Ave Green Street	San Fernando Valley Green Street Network Evaluation TOS SN-97 – Agnes Avenue	Los Angeles	Tujunga Wash	Green Street, Bioretention	This project is a green stormwater infrastructure (GSI) project located in Council District 2 in the North Hollywood area of Los Angeles. The project captures stormwater and urban runoff from a 80-acre watershed and infiltrates the captured water into underground aquifers. During a normal rainy season, the project has the potential to capture more than 16 million gallons of water annually. The project takes a distributed approach and installs green stormwater infrastructure at various locations in the drainage area. Rain gardens, catch basins and drywells capture and infiltrate rainwater and urban runoff.	34.18676	-118.41172	Not Applicable	6/15/2021	\$2,488,600.00	\$227,042.00	Other State Program, Other Municipal Program	1.00 ac	80.00 ac	Not Applicable	0.00 ac-ft	0.00 ac-ft

Elmer Avenue Green Street Phase II	Elmer Avenue Phase II: Elmer Paseo	Los Angeles	LA River - Below Sepulveda Basin	Green Street, Bioretention	The project, located in CD 6, converted a paved 20' x 270' alley into a pocket park with water quality improvements, including a pervious pedestrian pathway and a vegetated swale. Sedimentation removal devices were also be installed.	34.211076	-118.376872	Not Applicable	11/19/2013	\$2,530,000.00	\$809,531.00	City of LA Proposition O, Other Non-profit Organization	1.00 ac	45.00 ac	29.60 ac-ft	0.00 ac-ft	0.00 ac-ft
Elmer Paseo Green Alley	Not Applicable	Los Angeles	LA River - Below Sepulveda Basin	Green Street, Bioretention	This project is located in Los Angeles City Council District 6 in a residential alley in the Sun Valley community. The project site is an alley that runs between Keswick Avenue and Lull Street. The project captures storm water flow from a 20-acre area and diverts the runoff to the Elmer Paseo alley. The runoff flows onto permeable materials and into bioswales where it infiltrates into underground aquifers. The project also includes drought tolerant plantings and educational signage. In a normal wet season, this project has the potential to capture, treat and infiltrate 1,300,000 gallons of storm water into groundwater basins. This is a demonstration project that serves as a template for future neighborhood retrofits throughout the Los Angeles region. It simultaneously reduces pollutant loads in stormwater runoff, improves water quality in the Los Angeles River watershed, mitigates flooding and provides an improved walkway for residents.	34.209814	-118.376878	Not Applicable	11/1/2013	\$550,000.00	\$175,985.00	City of LA Proposition O, Other Non-profit Organization	1.00 ac	20.00 ac	29.75 ac-ft	0.15 ac-ft	162.88 ac-ft

Lankershim Blvd Green Street	San Fernando Valley Green Street Network Evaluation TOS SN-68 Lankershim Boulevard	Los Angeles	LA River - Below Sepulveda Basin	Green Street, Bioretention	This project is located in Council District 2, in a highly urbanized North Hollywood neighborhood. The project captures stormwater and urban runoff from a 67-acre watershed and infiltrates the captured water into underground aquifers. During a normal rainy season, the project has the potential to capture more than 23 million gallons of water annually. The project takes a distributed approach and installs green stormwater infrastructure at various locations along Lankershim Blvd. A bioswale and dry well system capture and infiltrate rainwater and urban runoff. The planting of trees greens and cools the surrounding neighborhood.	34.169677	-118.379049	Not Applicable	6/15/2021	\$3,780,000.00	\$344,860.00	Other State Program, Other Municipal Program	1.00 ac	107.00 ac	18.58 ac-ft	0.02 ac-ft	91.17 ac-ft
Laurel Canyon Blvd Green Street	Not Applicable	Los Angeles	Tujunga Wash	Green Street, Bioretention	This project is located in Council District 7, in the Pacoima neighborhood. The project consists of infiltration swales and drywells. The project captures stormwater and urban runoff from a 123 acre watershed and infiltrates the captured water into underground aquifers.	34.250605	-118.423473	Not Applicable	6/1/2017	\$3,727,456.00	\$791,958.00	CA State Proposition 84, Other Municipal Program	1.00 ac	123.00 ac	19.26 ac-ft	0.20 ac-ft	360.36 ac-ft
Manchester Greenway	Manchester Neighborhood Greenway	Los Angeles	Compton Creek	Green Street, Biofiltration	The project converts an existing neglected pathway to a low maintenance green walkway. Project elements include new native shade trees, tree wells, landscaping with drought-tolerant plants, an infiltration basin, a stormwater diversion structure, a walkway made of decomposed granite, and lighting for pedestrian safety in the walkway. The project also installed security gates on each end of the walkway. In addition, the Project provides valuable green space, educational opportunities through signage, and community connectivity to the Metro busway station at Manchester and 110 Freeway. The project was completed in December 2015.	33.959217	-118.281999	Not Applicable	12/1/2015	\$850,000.00	\$109,440.00	Other Municipal Program	1.00 ac	3.00 ac	5.98 ac-ft	0.18 ac-ft	21.38 ac-ft

Quincy Jones Green Alley Network	N/A	Los Angeles	Compton Creek	Green Street, Biofiltration	Project Type: Green Alley This Project reimagines two alleys in South Los Angeles by installing stormwater capture and infiltration Best Management Practices including infiltration trenches, infiltration planters, and trash capture systems. It also includes the planting of trees and vegetation. This will mitigate flooding, reduce strain on the existing stormwater system, and reduce demand for imported water through groundwater discharge. The Project will also increase green space and safe routes for alternative transportation within a severely disadvantaged community. The goals of the project include decreasing the volume of contaminated stormwater flowing into the Ballona Creek and Santa Monica Bay.	34.0153217	-118.2640149	Not Applicable	11/30/2022	\$1,092,348.00	\$32,772.00	Other State Program, Other Municipal Program	0.41 ac	4.30 ac	3.60 ac-ft	3.60 ac-ft	8.35 ac-ft
Ramona Gardens Rain Gardens	Not Applicable	Los Angeles	LA River - Below Sepulveda Basin	Green Street, Bioretention	The project site is located at Housing Authority Ramona Gardens Community Service Center (2830 Lancaster Avenue, Los Angeles 90033) of the City of Los Angeles. It is located in Council District 14 and collects stormwater from drainage area at the community center. The project collects surface flow to alleviate flooding in the housing complex areas.The project has multiple benefits, including reducing stormwater runoff, recharging the ground water basin, improving air quality, and enhancing pedestrian use of sidewalks. The purpose of the infiltration rain gardens and swales is to capture storm water runoff and infiltrate it into the ground in order to reduce storm water pollution, to prevent flooding during rain events, and to provide recharge of groundwater basin. The Project was completed in March 2013.	34.056958	-118.194391	Not Applicable	3/1/2013	\$330,000.00	\$56,118.00	CA Natural Resources Agency	1.00 ac	7.00 ac	Not Applicable	0.37 ac-ft	33.13 ac-ft
Riverdale Avenue Green Street Project	Not Applicable	Los Angeles	LA River - Below Sepulveda Basin	Green Street, Biofiltration	This project was proposed as a demonstration project to establish one of several potential future citywide green street design standards for improving the water quality and reducing the amount of storm runoff from City streets. The project reconstructed the existing sidewalks and parkways on both sides of Riverdale Avenue between Crystal Street and the Los Angeles River. The proposed filtration basins receive street runoff with the intent to both irrigate parkway plants and infiltrate street runoff.	34.092143	-118.233472	Not Applicable	12/1/2014	\$500,000.00	\$71,877.00	Other State Program	1.00 ac	14.00 ac	22.92 ac-ft	0.32 ac-ft	94.78 ac-ft

Van Nuys Great Street	Not Applicable	Los Angeles	Tujunga Wash	Green Street, Bioretention	This project is located in Council District 2 in the North Hollywood area of Los Angeles. The project captures stormwater and urban runoff from a 87-acre watershed and infiltrates the captured water into underground aquifers. During a normal rainy season, the project has the potential to capture more than 15 million gallons of water annually. The project takes a distributed approach and installs green stormwater infrastructure at various locations in the drainage area. A rain garden, catch basins and drywells capture and infiltrate rainwater and urban runoff.	34.18676	-118.41172	Not Applicable	6/15/2021	\$2,549,694.00	\$116,310.00	City of LA Proposition O, Other Municipal Program	1.00 ac	3.10 ac	19.55 ac-ft	0.00 ac-ft	0.00 ac-ft
Van Nuys Great Street	Van Nuys Boulevard Green Street Project	Los Angeles	Tujunga Wash	Green Street, Biofiltration	The Van Nuys Boulevard Green Street Project is located in Los Angeles City Council District 7 in a residential area in the Pacoima community. The Van Nuys Boulevard Green Street Project captures storm water from a 100-acre area and infiltrates the captured water into underground aquifers. In a normal wet season, this project has the potential to capture and infiltrate almost 31 million gallons of storm water into groundwater basins. The project took a distributed approach and installed two types of green stormwater capture infrastructure at various locations around the neighborhood. A bioswale and dry well system or a porous concrete gutter and drywell system were constructed at 21 locations. Additionally, 65 shade trees were planted as part of the project.	34.263901	-118.428834	Not Applicable	6/1/2018	\$3,360,000.00	\$529,131.00	Other State Program, Other Municipal Program	1.00 ac	100.00 ac	35.76 ac-ft	0.16 ac-ft	241.89 ac-ft

Appendix B

Section 1.3 – Watershed Control Measures Planned and In Progress

Order R4-2021-0105 NPDES Permit No. CAS004004 - Appendix H, Section 1.3 Watershed Control Measures Planned and In Progress requires the completion of Table 1b for watershed control measures planned and in progress completed from December 28, 2012, to the end of this reporting period. Section 1.3a provides a list of additional information to be provided for each watershed control measure planned and in progress. Appendix B of this Semi-Annual Report includes this information in 2 parts to address these requirements. The tables are titled as follows:

- Section 1.3 - Table 1b (Part 1): Watershed Control Measures Planned and In Progress
- Section 1.3 - Table 1b (Part 2): Additional Information

Section 1.3 - Table 1b-part 1: Watershed Control Measures Planned and In Progress

Project Name	Permittee(s)	Subwatershed	Project Type	Description	Latitude	Longitude	Required Completion Date in WMP	Estimated Completion Date	Estimated Capital Costs [\$]	Estimated Annual O&M Costs [\$]	Funding Source(s)	Project Footprint [Acres]	Drainage Area [Acres]	Projected Storage Capacity in WMP [Acre-feet]	Status
Alexandria Park Stormwater Capture Project	Los Angeles	LA River - Below Sepulveda Basin	Regional Infiltration Gallery	The project proposes to capture stormwater runoff from a 171-acre tributary area with an estimated average yield up to 72 AFY by diverting flows within the Tujunga Wash Central Branch (MTD 30) to the park. Best Management Practices (BMPs) strategically located throughout the park are proposed to capture and store stormwater runoffs. The proposed Project consists of installing a 0.5-acre underground infiltration gallery to capture and infiltrate stormwater at Alexandria Park. Construction of the underground infiltration gallery will include the installation of a diversion structure, storm pipe, flow measuring device, and educational signage.	34.183219	-118.397562	Not Applicable	12/31/2028	\$24,579,380.00	\$ 737,381.00	Not Applicable	0.5	171.00 ac	Not Applicable	Design
Aliso Creek – Limekiln Creek Restoration Project	Los Angeles, Los Angeles County Flood Control District	Aliso Wash	LID Retrofit, Biofiltration	The proposed project is located in Council District 12 and has a site area of approximately 11.8 acres, with the Limekiln Creek and Aliso Creek merging in the southern portion of the site. The project consists of constructing several stormwater treatment best management practice (BMP) facilities aimed at treating offsite and onsite runoff and reducing loadings of several contaminants to Aliso Creek, Limekiln Creek, and the Los Angeles River to aid the City and the Bureau of Sanitation in meeting the Total Maximum Daily Load requirements in the watershed.	34.23304566	-118.5478893	09/30/2026	09/30/2026	\$19,163,000.00	\$ 287,445.00	Safe, Clean Water	11.8	12,515.00 ac	341.2	Design
Altadena - Lake Avenue Green Improvement Project	Unincorporated LA County	Arroyo Seco	Infiltration Well	The project will provide water quality, water supply, and community investment benefits to the nearby DAC by diverting and capturing urban and stormwater runoff through the implementation of best management practices (BMPs) such as bioswales, drywells, and permeable pavement.	34.185796	-118.131484	03/23/2037	06/01/2028	\$ 8,650,000.00	\$ 65,000.00	Safe, Clean Water, Municipal General Fund	2.39	262.00 ac	Not Applicable	Planning

Broadway-Manchester Multi-Modal Green Streets Project (StreetsLA)	Los Angeles	Compton Creek	Green Street, Bioretention	The Project is in South Los Angeles along a 2.8 mile stretch of Manchester Avenue (from Vermont Avenue to S Broadway) and S Broadway (from Manchester Avenue to Imperial Highway). The City of Los Angeles (City) was able to secure funding through the Measure W Safe Clean Water (SCW) Program to provide stormwater treatment, capture, reuse, and discharge infrastructure throughout the Project limits. The Measure W improvements will be implemented in conjunction with the Broadway-Manchester Active Transportation Program (ATP) Equity Project which strives to promote connectivity, mobility, and safety along the corridors. To meet these goals, the Feasibility Study created a hydrologic model to study the drainage area - approximately 205 acres encompassing an area greater than the ATP project tributary area. A parallel storm drain system with new inlets upstream of existing inlets were proposed throughout the entire project to collect the 85th percentile storm. Approximately 120 vertical cisterns (50’ depth) were proposed as the stormwater storage option. The cisterns were sized to capture 100% of the 85th percentile/24-hour stormwater runoff in the drainage area and identified a capture volume of 100 acre-feet of stormwater annually. 29 acre-feet/year was assumed to be used for irrigation of the Project site. The proposed treatment of the stormwater consisted of a cartridge media filter and ultraviolet (UV) disinfection. The remaining 71 acre-feet/year of captured stormwater was proposed to be discharged as drawdown to the sanitary sewer system for recycled water production at the LA County Joint Water Pollution Control Plant 2 (JWPCP). It is important to note that infiltration was assumed to be infeasible and was not included in the Feasibility Study hydrologic model.	33.9600062	-118.278278	Not Applicable	06/30/2026	\$23,773,962.00	\$ 713,219.00	Safe, Clean Water	1.41	186.00 ac	8.42	Design

David M. Gonzales Recreation Center Stormwater Capture Project (LADWP)	Los Angeles	Tujunga Wash	Regional Infiltration Gallery	The Project will capture, treat, and infiltrate stormwater runoff from a 759-acre tributary area with an estimated average annual yield of 448 acre-feet per year (AFY). Stormwater from Tributary Area 1 (310 acres) will be conveyed through an existing storm drain system that converges to a 63-inch diameter reinforced concrete pipe (RCP) storm drain located on Pierce Street. The stormwater from Tributary Area 2 (449 acres) is conveyed through an existing storm drain system that converges to an 84-inch diameter RCP storm drain located on Van Nuys Boulevard. The proposed Project will divert, treat, and infiltrate approximately 448 AF of stormwater annually from the combined 759-acre drainage area while improving the water quality of the Los Angeles River. To accomplish this, the Project will utilize two diversion structures, hydrodynamic separators, desilting basins, and subsurface infiltration galleries.	34.269085	-118.412769	Not Applicable	09/30/2027	\$67,180,820.00	\$ 2,015,425.00	Safe, Clean Water	2.6	759.00 ac	Not Applicable	Design

E 6th St Green Infrastructure Corridor	Los Angeles	LA River - Below Sepulveda Basin	Green Street, Biofiltration	The E 6th St Green Streets Project is a Project in the Boyle Heights Neighborhood of the City of Los Angeles within Council District 14 and the Upper Los Angeles River Watershed. The expected scope of work will be installing street trees, bioswales, and curb bumpouts. The BMPs will improve water quality, reduce heat island effect, and incorporate new trees.	34.0361098	-118.210648	Not Applicable	08/31/2027	\$ 5,068,459.00	\$ 52,500.00	Safe, Clean Water, Other Municipal Program	1	49.60 ac	0.08	Planning
Eagle Rock Boulevard: A Multi-Modal Stormwater Capture Project (StreetsLA)	Los Angeles	LA River - Below Sepulveda Basin	Green Street, Biofiltration	The Eagle Rock Boulevard: A Multi-Modal Stormwater Capture Project (Project) is a dry-weather & biofiltration project at Eagle Rock Blvd between Westdale Ave and York Blvd to complement 1.1 miles of ATP improvements. The Project aims to realize water quality benefits through biofiltration areas installed between York Boulevard and Westdale Avenue where the improved median is proposed. A 90-inch pipe passes beneath Eagle Rock Boulevard and drains a significant area (2,220 acres total). The drainage area covers the ULAR EWMP Group jurisdictions of Los Angeles, Glendale, and Pasadena. This project is located within the EWMP subwatershed 648049, which has identified a need for 16.56 ac-ft of regional BMP capacity, and aims to add 1.26 ac-ft of storage towards that need within the subwatershed. The primary mechanism by which the Project will achieve the primary water quality objectives are through runoff/pollutant capture and filtration. The Project will install a diversion in the existing 90-inch storm drain and direct flows to a pretreatment unit and subsequent underground storage tank. These captured flows will be pumped up to the 0.9 acres of biofiltration located within the media where flows will pass through soil media to remove pollutants. The proposed street layout above the dry-weather runoff storage facility incorporates green street elements to provide community benefits of urban greening and lowered heat island.	34.127807	-118.217737	Not Applicable	06/30/2027	\$11,114,207.00	\$ 137,000.00	Safe, Clean Water	0.9	2,220.00 ac	1.26	Pre-Planning

Fernangeles Park Stormwater Capture Project (LADWP)	Los Angeles	LA River - Below Sepulveda Basin	Regional Infiltration Gallery	The Project will capture, treat, and infiltrate stormwater runoff from a 317-acre tributary area with an estimated average annual yield of 202 acre-feet per year (AFY). The proposed scope of work at Fernangeles Park would include the installation of an underground infiltration gallery to capture stormwater from the existing Caltrans pump station along the Interstate-5 freeway and the surrounding neighborhood for infiltration and replenishment of the San Fernando Groundwater Basin. The conveyance of discharge flow from the Caltrans pump will require installation of a flow-by pretreatment targeting removal of Particulate Organic Carbon (POC), which includes ammonia, metals, indicator bacteria and trash. The infiltration gallery would overlap open space and two existing sports fields, including the infield and outfield of one baseball field and one softball field, respectively. In addition to the gallery, other underground stormwater components will include the installation of a diversion structure, desilting basin, piping, a cross gutter, hydrodynamic separators, and flow-measuring devices. Additional program activities would include redesigning Allegheny Street, running parallel to the North side of Fernangeles Park to capture and treat stormwater runoff. The redesign would include green elements as well as conveyance piping to alleviate localized flooding associated with the Caltrans pump station off the Interstate-5 freeway at Sheldon Street.	34.2300996	-118.4018704	Not Applicable	11/30/2027	\$44,811,480.00	\$ 1,344,344.00	Safe, Clean Water	1.7	317.00 ac	Not Applicable	Design

In addition, the Project will add landscaping to the community to offer greening benefits.	34.20493504	-118.3877843	Not Applicable	02/19/2028	\$25,696,900.00	\$ 2,150,000.00	Safe, Clean Water	0.78	401.80 ac	22.94	Planning
Lincoln Park Neighborhood Green Street Network	Los Angeles	LA River - Below Sepulveda Basin	Green Street, Biofiltration	Project Type: Regional The project includes two main components: green street elements for the Lincoln Heights neighborhood and improvements within Lincoln Park focused in and around the lake. The goal of this project is to improve water quality, flood mitigation and habitat restoration within the Upper Los Angeles River Watershed. Improvements to the park will also improve the safety of the park and as well as improve community access through improvements to the lake. More than three miles of green streets through the Lincoln Heights neighborhood will improve air quality and provide aesthetically appealing green spaces for residents to enjoy year-round. Additional 500 trees, 1100 parkway planters, and 16 new vegetated medians through the neighborhood will provide shade, reduce the heat island effect and cool the area for pedestrians and people engaged in active recreation. The 46 drywells will reduce flooding, especially during significant storm events. Collectively, these improvements will be a newer, fresher, and greener start to this neighborhood, all without displacing any residents or businesses.	34.06702825	-118.201327	Not Applicable	04/30/2029	\$18,634,580.00	\$ 180,000.00	Safe, Clean Water, City of LA Proposition O	157	195.00 ac	46	Planning

North Hollywood Park Stormwater Capture Project	Los Angeles	LA River - Below Sepulveda Basin	Regional Infiltration Gallery	The project proposes to capture stormwater runoff from a 2,045-acre tributary area with an estimated average yield up to 1,150 AFY by diverting flows within the Tujunga Wash Central Branch. Best Management Practices (BMPs) strategically located throughout the park are proposed to capture and store stormwater runoffs. The proposed Project consists of installing a combined 8.1-acre underground infiltration galleries to capture and infiltrate stormwater at North Hollywood Park. Construction of the underground infiltration galleries will include installation of two diversion structures, pipes, one pump station, flow measuring devices, and educational signage.	34.166709	-118.380361	Not Applicable	12/31/2031	#####	\$ 8,712,087.00	Not Applicable	8.1	2,045.00 ac	Not Applicable	Design
North Sepulveda Pedestrian Island	Los Angeles	LA River - Below Sepulveda Basin	Green Street, Biofiltration	The Project is located on Sepulveda Blvd between Haynes Street and Lemay Street. It lies within the Van Nuys neighborhood of the City of Los Angeles within the Upper Los Angeles River (ULAR) watershed. The median island is 13 feet in width and approximately 1300 feet in length. The median island will be enhanced as an urban green passageway, a 5 ft-wide walkway path will run the length of the median intersecting a newly constructed seating area at the existing Metro stop, and constructing ADA-compliant ramps. Dense hedge-like plants and low-growth trees will be planted about the path along little Sepulveda to provide a noise and aesthetically buffer to the adjacent residential neighborhood along this highly urbanized City corridor. Trash receptacles will be placed along the path and educational signage throughout the median to highlight the importance of urban greening, climate resiliency and heat-island effect on urban-dense LA, and the water quality enhancements this system will provide to the nearby LA River.	34.19029773	-118.4663341	Not Applicable	06/30/2025	\$ 1,943,450.00	\$ 50,000.00	Safe, Clean Water, Other Federal Program	0.35	2.63 ac	1.27	Design

Online Outreach Program	Los Angeles	Not Applicable	Outreach and Conservation Program	During this reporting period, the City of Los Angeles utilized various online platforms to distribute public information/educational messaging targeting pollutants of concern, engage with the public and raise public awareness of stormwater program benefits and needs. Methods used include the following: (1) the creation of content for web pages on LA Sanitation and Environment’s website for the Watershed Protection Program (lacitysan.org/watershedprotection) and Safe Clean Water Program (lacitysan.org/safecleanwater), which have 79 and 28 web pages respectively and have experienced 154,363 and 4,844 page views respectively; (2) the creation and distribution of an e-newsletter to approximately 16,000 subscribers quarterly with an average open rate of 36.2% and every e-newsletter issue including an article about a Safe Clean Water Program Project; (3) the creation of content and administration of a Facebook page (13,568 followers; 170 posts that reached 20,182 people), an Instagram feed (1,437 followers; 170 posts that reached 28,141 people), a blog with 36 published articles and a YouTube channel, which houses 48 educational videos and has 212 subscribers; (4) the creation and distribution of targeted e-blasts to gardeners and teachers. One e-blast with pollution prevention messaging targeting pesticides and fertilizers was sent to gardeners (4,172 subscribers with a 33% open rate) in spring 2024 and two e-blasts to teachers with information on available educational materials sent in November 2023 (1,162 subscribers with a 35.6% open rate) and February 2024 (1,159 subscribers with a 37.7% open rate). These activities were performed by the jurisdiction. Point of Purchase Program	Los Angeles	Not Applicable	Outreach and Conservation Program	During this reporting period, educational point of purchase educational materials were distributed to 151 automotive retail stores; 155 certified used motor oil collection centers; 60 pet-related retail stores, veterinarians and groomers; 17 home improvement stores and garden centers. The program conducted intercept surveys (97 in English and 97 in Spanish) to measure the efficacy of paint and pesticides/fertilizers outreach materials (e.g. shelf talkers). Intercept survey results indicated that the educational materials were effective in increasing the percentage of residents who were familiar or very familiar with the correct usage of pesticides/fertilizers by 28% and in increasing the percentage of residents who were familiar or very familiar with the correct disposal of unwanted paint by 29%. Public Education / Collateral Materials	Los Angeles	Not Applicable	Outreach and Conservation Program	The program has various printed outreach materials available for distribution in 13 languages: Armenian, Simplified Chinese, English, Farsi, Hindi, Japanese, Khmer, Korean, Russian, Spanish, Tagalog, Thai, Vietnamese. These materials focus on residential best management practices. Various collateral items (dog waste bag canisters and refills, refrigerator magnets, seed packets, pens, pencils, stickers, children's activity book, tip cards, car trash bags, reusable canvas bags, t-shirts and book markers), are available and distributed to the general public to educate them about LA's regional stormwater system and encourage positive behavior change to reduce pollutants in LA's waterways. Resident Stormwater Behaviors and Attitudes Study	Los Angeles	Not Applicable	Other	During this reporting period, the City of Los Angeles conducted a Resident Stormwater Behaviors and Attitudes Study to (1) Enhance the City’s understanding of public perceptions, beliefs, and attitudes regarding stormwater issues on a local level; (2) Understand the motivators and barriers that drive stormwater-related behaviors; and (3) Identify specific subgroups of the population - defined by stormwater-related psychographic traits (perceptions, beliefs, and attitudes) - that future outreach efforts should focus on. The research was conducted via online and in-person surveys from November 2023 through March 2024. Many aspects of the study (e.g. survey questions, sample size, and approach) were informed by the Los Angeles County Department of Public Works’ 1997 L.A. County Stormwater Segmentation Study. The online survey received a total of 958 responses (53 in Spanish) from City residents. In-person intercept survey efforts from January 13 through March 1, 2024 enhanced accessibility and reach. Intercept surveys were conducted at 9 locations with high foot traffic, yielding 66 additional responses (43 in Spanish). In general, City of Los Angeles residents are concerned about the environment (84%), interested in learning more about the actions they can take to support safe clean water (89%), and willing to change their behaviors (60%) to further reduce stormwater pollution. Since the 1997 county-wide study, current findings indicate an overall reduction in potentially polluting behaviors among residents (very few, if any, participate in such actions), yet some potentially harmful behaviors have become more prevalent, particularly those involving motor oil. This indicates a need to tailor outreach efforts to specific subgroups, or audiences, of the population whose behavior changes, which they’re already receptive to, could yield a significant reduction in local stormwater pollution and foster behavioral norms. When characterizing the population based on psychographic traits, 7 audience groups (or personae) emerge: Fix-it Foul-ups, Caring community members, Preoccupied Polluters, Super-polluters, Homebodies, Non-polluters, and Unwilling. Two of these groups are the most promising for public education and outreach based on their prevalence within the population, their willingness to change, and the anticipated benefits of effectively reaching them: 1. Fix-it Foul-ups. Likely-to-pollute individuals who are very willing to change and highly interested in learning more. Like all groups with higher pollution levels (weighted pollution impact of 20%), they tend to overestimate how much they know, yet are relatively unlikely to have received information about stormwater pollution prevention. 2. Pre-occupied Polluters. The weighted pollution impact of this group is 45%, reflecting both the size of the group and their relatively high propensity to pollute. Their willingness to change is moderate, though lower than Fix-it foul-ups or Caring community members. They are only slightly interested in learning more and tend to slightly overestimate their knowledge of this issue, posing unique messaging challenges. A third group stands out as a particularly powerful ally when persuading Fix-it Foul-ups, Pre-occupied Polluters, and other groups who may engage in the same activities: 3. Caring Community Members. Residents with low contributions to pollution (weighted pollution impact of 3%), yet verywilling to change. When combined with Non-polluters, they constitute nearly half of all residents with environmentally conscious sentiments. Thus, they may play a key role in establishing norms around pro-environmental behaviors and attitudes in relation to specific activities that they share with those in other groups. However, they report a relatively low level of knowledge, so helping them see themselves as knowledgeable in these areas, such as car, home, and yard maintenance, may be necessary. The fourth and fifth groups, Super-Polluters and Homebodies may warrant further study. 4. Super-polluters. A small group that engages in potentially polluting behaviors at nearly twice the rate of the next highest polluting audience groups (on average) with a weighted pollution impact of 23% despite its size. While limited, data from these residents indicates they are more receptive to learning more on the topic than other groups. 5. Homebodies. Contributing very little to overall pollution (weighted pollution impact of 3%), Homebodies also have a moderate willingness to change but their interest in learning more is not high. However, some Homebody residents may be more receptive to new information and willing to consider changing specific behaviors. Thus, effective messaging to Homebodies should focus on specific pollution targets. The sixth and seventh audience groups are not thought to warrant targeted messaging. 6. Non-polluters. Residents who report engaging in none of the targeted polluting behaviors (31-33%) is significantly larger than in the 1997 L.A. County Segmentation Study (20%). With Caring Neighbors, this population has an important role in maintaining pro-environmental norms, but messaging resources would be better allocated to those whose behaviors are impacting the water than to Non-polluters. 7. Unwilling. This small population (4-5% of total) indicates a very low willingness to change, but tends to pollute less than heavy polluting groups. Given their weighted pollution impact of around 6% and disinterest in learning more, messaging resources would be better allocated towards other groups. When considering how to orient Program messaging to each audience, all groups find the City of Los Angeles to be the most trustworthy source of stormwater information. Caring Community members, Fix-it Foul-ups, and Super-polluters are family-oriented, care about how their neighborhoods look, are health-conscious, and are concerned about their environment. They are eager to learn, and messages that speak to their desire to “do the right thing” are likely to resonate. Many of the same messages are likely to persuade all three audiences. Pre-occupied Polluters may respond best to messages that frame pro-environmental behaviors as compatible with their individual lives. They have other things on their mind and do not express the strong family and neighborhood orientations of the Caring Community members, Fix-it Foul Ups, and Super-polluters. They care most about their health, animals, the outdoors, and the environment, but demonstrate less enthusiasm than other groups. School Education Program	Los Angeles	Not Applicable	Outreach and Conservation Program	During this reporting period, the City provided educational programming related to watersheds and stormwater pollution prevention to LA-area students visiting the Environmental Learning Center (ELC) at Hyperion Water Reclamation Plant and the Discovery Cube Los Angeles on field trips. A total of 304 LA-area students visited the ELC. The total number of students visiting the Discovery Cube on field trips was 55,876. The number of students educated through the Discovery Cube LA’s classroom education programs was 7,100. LA Sanitation and Environment sponsored the 2024 Kids Ocean Day at Dockweiler Beach in May 2024 - an annual beach clean-up and aerial art event hosted by the non-profit Malibu Foundation for Environmental Education and which typically has approximately 4,000 participating elementary students. LA Sanitation and Environment’s sponsorship of \$10,000 provided for school buses to transport LA-area students to Kids Ocean Day. The City also made educational materials (activity books, stickers, posters, pens and pencils) available to teachers in the Los Angeles area. Two e-blasts were sent out to teachers informing them about the availability of educational materials for their classrooms. In November, an e-blast was sent to 1,163 teachers with a 35.6% open rate. In February, a second e-blast was sent to 1,157 teachers with a 37.7% open rate. The program distributed educational materials to four LA-area schools during this reporting period. Appendix C

Section 1.4 – Water Body Pollutant Combination (WBPC) Compliance

Order R4-2021-0105 NPDES Permit No. CAS004004 - Appendix H, Section 1.4 Water Body Pollutant Combination (WBPC) Compliance requires the completion of Table 1c for all WBPCs identified in the Watershed Management Program. The table is titled as follows:

- Section 1.4 – Table 1c: Water Body Pollutant Combination (WBPC) Compliance

1.4 Water Body Pollutant Combination (WBPC) Compliance. Complete Table 1c on an Excel spreadsheet for all WBPCs identified in the Watershed Management Program. If information is not available for a particular field, the field should indicate "Not Applicable" (N/A) [Order – X].

Table 1c: WBPC Compliance^[1]

WBPC Category (1, 2, or 3)	Pollutant	Receiving Water	Weather Condition (Wet, Dry, N/A)	Interim or Final	Deadline	Deadline Met? (Yes, No, N/A)	Method of Compliance ^[2]
Category 1	Trash	LA River Reach 2	Dry/Wet	Final	Sep 2016 - 100% Milestone	Yes	[3]

Category 3	Thallium	LA River Reach 6	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Zinc	LA River Reach 3 (below LAG)	Dry	Final	Jan 2024 - 100% Milestone	Yes	Receiving Water Monitoring
Category 3	Benzo(a)pyrene	Rio Hondo Reach 3	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Benzo(k)fluoranthene	Rio Hondo Reach 3	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Chrysene	Rio Hondo Reach 3	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Diazinon	Rio Hondo Reach 3	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Dibenz(a,h)anthracene	Rio Hondo Reach 3	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Indeno(1,2,3-cd)pyrene	Rio Hondo Reach 3	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Zinc	Compton Creek	Dry	Final	Jan 2024 - 100% Milestone	Yes	Receiving Water Monitoring
Category 3	2,3,7,8-TCDD (Dioxin)	Burbank Western Channel	Dry	Final	Jan 2024 - 100% Milestone	Yes	Receiving Water Monitoring
Category 3	Benzo(a)pyrene	Burbank Western Channel	Dry	Final	Jan 2024 - 100% Milestone	Yes	Receiving Water Monitoring
Category 3	Benzo(b)fluoranthene	Burbank Western Channel	Dry	Final	Jan 2024 - 100% Milestone	Yes	Receiving Water Monitoring
Category 3	beta-BHC	Burbank Western Channel	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Heptachlor	Burbank Western Channel	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Cadmium	Burbank Western Channel	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Cadmium	Tujunga Wash	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Chlorpyrifos	Compton Creek	Dry	Final	Jan 2024 - 100% Milestone	Yes	Receiving Water Monitoring
Category 3	Mercury	Rio Hondo Reach 3	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Mercury	Burbank Western Channel	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Mercury	Tujunga Wash	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Thallium	Burbank Western Channel	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Zinc	Verdugo Wash	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Zinc	Tujunga Wash	Dry	Final	Jan 2024 - 100% Milestone	Yes	Receiving Water Monitoring
Category 3	Cadmium	Caballero Creek	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Mercury	Caballero Creek	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Nickel	Caballero Creek	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A
Category 3	Zinc	Caballero Creek	Dry	Final	Jan 2024 - 100% Milestone	N/A ^[7]	N/A

Table 1c: WBPC Compliance^[1]

WBPC Category (1, 2, or 3)	Pollutant	Receiving Water	Weather Condition (Wet, Dry, N/A)	Interim or Final	Deadline	Deadline Met? (Yes, No, N/A)	Method of Compliance ^[2]
Category 1	Trash	Legg Lake	Dry/Wet	Final	Mar 2016 - 100% Milestone	Yes	^[3]
Category 1	Phosphorus, Total	Legg Lake	Dry/Wet	Final	Jun 2024 - 100% Milestone	N/A ^[8]	N/A
Category 1	Phosphorus, Total	Lake Calabasas	Dry/Wet	Final	Jun 2024 - 100% Milestone	N/A ^[9]	N/A
Category 1	Nitrogen, Total	Legg Lake	Dry/Wet	Final	Jun 2024 - 100% Milestone	N/A ^[8]	N/A
Category 1	Nitrogen, Total	Lake Calabasas	Dry/Wet	Final	Jun 2024 - 100% Milestone	N/A ^[9]	N/A
Category 1	Ammonia-N	Legg Lake	Dry/Wet	Final	Jun 2024 - 100% Milestone	N/A ^[8]	N/A
Category 1	pH	Legg Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 1	Odor	Legg Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 1	PCBs (Water)	Echo Park Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 1	PCBs (Sediment)	Echo Park Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 1	Chlordane (Water)	Echo Park Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 1	Chlordane (Sediment)	Echo Park Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 1	Dieldrin (Water)	Echo Park Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 1	Dieldrin (Sediment)	Echo Park Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 1	Trash	Echo Park Lake	Dry/Wet	Final	Sep 2016 - 100% Milestone	Yes	^[3]
Category 2	DDTs (Water)	Legg Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 2	DDTs (Sediment)	Legg Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 2	PCBs (Water)	Legg Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]
Category 2	PCBs (Sediment)	Legg Lake	Dry/Wet	Interim	2016 - Interim Milestone	Yes	Full Compliance of Approved WMP ^[10]

[1] WBPCs identified in the updated WMP submitted to the Los Angeles Regional Water Quality Control Board in December 2023 with deadlines that occurred during or prior to the end of the Reporting Period are presented within this table. Results for WBPCs with deadlines that have not yet passed will be presented in future submittals when deadlines for those WBPCs occur during the covered Reporting Period and the subsequent submittals after when deadlines for those WBPCs occur.

[2] Choose between the following four options: (1) outfall monitoring, (2) receiving water monitoring, (3) no direct or indirect discharge from MS4 to the applicable receiving water, or (4) full compliance of an approved WMP. If selecting option (4), reference applicable projects in Table 1a and 1b.

[3] For Trash WBPCs, compliance was determined as outlined in Part X.C of the MS4 Permit and reported in each individual Permittee's response to the Trash TMDL Reporting Form (Attachment I of the 2021 Permit) which is submitted in December of each year.

[4] As documented in the Phase I Report submitted by the City of Los Angeles on March 23, 2022, meeting TMDL numeric targets in Segment B is dependent on E. coli loading from upstream segments. At the time that the deadline passed, water quality data collected at the downstream end of Segment C were evaluated to determine whether upstream segments may be contributing to E. coli concentrations above the TMDL numeric targets. During the evaluation, it was observed that E. coli concentrations recorded at the downstream end of Segment C during monthly dry weather monitoring events regularly exceeded the single sample maximum (SSM) TMDL numeric target (235 MPN/100 mL). This is to be expected given that Phase I LRS implementation in Segment C is not scheduled to be completed until September 2027.

[5] Applicable projects in Table 1a: Arroyo Seco LFD Sycamore Grove Park AS-15 and Arroyo Seco LFD Hermon Park AS-21.

[6] Evaluation of this milestone requires consideration of data collected during the time period of November 1st to October 31st. Since the final milestone became effective on September 23, 2023, the first period for evaluation did not end until October 31, 2024 (after the end of the reporting period). The results of that evaluation will be reported in the WMP Progress Reporting Form submitted no later than June 15, 2025.

[7] No receiving water data were available to evaluate attainment of this milestone during this reporting period.

[8] No receiving water data were available after the milestone date to evaluate attainment of this milestone.

[9] Evaluation of this milestone requires consideration of data collected during the summer (May-September) and annual reporting period. Since the final milestone became effective in June 2024, the first period for evaluation did not end until September 30, 2024 (after the end of the reporting period). The results of that evaluation will be reported in the WMP Progress Reporting Form submitted no later than June 15, 2025.

[10] The 2016 Interim Milestone in the ULAR WMP was based on development of an implementation plan. This requirement was met through development and submission of the ULAR WMP.
